

B. STARTUP SCHOOL AMSTERDAM

ASSESSMENT

For this first assessment, we ask you to build a personal website, using HTML and CSS. The website should consist of a minimum of three pages: "Home", "About Me", and "Personal Interests". This website gives you the opportunity to tell us more about who you are. Please make sure that a navigator bar is included and that there is a form available for people to contact you.

Feel free to use resources that are available to you, such as Codecademy, freeCodeCamp or other platforms that provide tutorials.

You'll need to install a text editor to create your HTML and CSS files from scratch, we recommend you use Sublime Text (<https://www.sublimetext.com/>) but any text editor you're comfortable to use is fine.

Once you have finished this assessment, please zip your project folder and email your website to us. If you have any questions about this assessment, feel free to send an email to camille@bssa.nu.

Good luck & enjoy!
